

PROPER INSTALLATION and use of infant and child CAR seats save the LIVES of CHILDREN every year.

Car seat technicians are available throughout Saskatchewan to ensure your car seats and booster seats are properly installed. Visit www.sgi.sk.ca/clinic or www.sgi.sk.ca/technicians for more information.

Use a car seat that fits your child's height, weight, and development for every ride. Always follow the instructions in your car seat and vehicle manuals.

1 Install an infant car seat before you have your baby. It should be rear-facing and placed in the backseat of your car.

2 Most forward-facing seats can be used when a child is at least 1 year of age (some require 2 years), and 10 kg (22lb). Waiting until your child outgrows their rear-facing seat before moving to a forward-facing seat is the safest way to travel.

4 It is law in Saskatchewan that children must use a car seat/booster seat until age 7, or must weigh 36 kg (80 lb) AND stand 145 cm (4'9") tall.

3 Most booster seats can be used when a child is at least 18 kg (40 lb), with some stating a minimum age for use (e.g., 4 years). A booster should be used until the child fits the seat belt properly (usually between 8 and 12 years of age).
